Recent Assignments

- Evaluated an international food manufacturer's end-to-end procure-to-pay process, identified improvement/savings opportunities, created business case, and led team in transforming its existing decentralized functional approach to an integrated, customer-centric service delivery model
- Created comprehensive change management plan and led execution for a large investor-owned utility's supply chain organizational transformation
- Led the assessment of an investor-owned Canadian utility's materials planning processes and designed an integrated demand planning approach that improved forecast reliability for critical materials and increased overall materials availability service levels
- Established an enterprise-wide supply chain policy, process, and procedure model to improve efficiency and effectiveness at a large investor-owned utility
- Created business case and led implementation effort for a mobile automatic identification and data capture solution for key warehouse tasks at a large vertically integrated utility
- Performed procure-to-pay leading practice assessment, identified an estimated \$10.2 million in recurring annual savings, and created a plan to address areas of improvement and achieve estimated savings at an investor-owned Canadian utility
- Worked with an investor-owned utility's sourcing team to analyze spend, evaluate market/supplier dynamics, and develop sourcing strategy plans for 15 categories which accounted for approximately \$150 million in managed spend and represented approximately 5% in identified savings
- Spearheaded the development of a product and services catalog and service level agreements for multifunction shared services organization (finance, HR, IT, and supply chain functions)
- Led project team in creating a user-friendly online playbook to drive consistent execution and effectively organize maintenance, operations, HR, safety, engineering, design, and construction documentation for long-term knowledge transfer for one of the largest generation utilities in the United States
- Facilitated all fossil power plant leadership teams across a multi-operating investor-owned utility in identifying, defining, and evaluating key plant risks; assisted in the development of mitigation plans to address high-impact risks
- Evaluated capital construction programs at a vertically integrated investor-owned utility. Developed leading practice gap analysis for key program management activities, including governance, planning and prioritization, program controls, and supply chain management
