

Robotic Process Automation: A Production-Ready Pilot

Determine the Right Operational Model for Your Organization

A proven way to cut costs, reduce errors, and decrease risks while improving shared services performance is to take advantage of robotic process automation (RPA). RPA is a technology solution that automates repetitive, rules-based processes through software. It is most suitable for processes with high volumes, high business impact, and well-defined rules. RPA is used in a wide range of shared services functions, from finance and HR processes to customer service and data management processes.

Among options for operational improvement, RPA is an inexpensive and easy-to-use tool that addresses the most error-prone component of highly repetitive processes: human interaction. RPA allows you to lower the cost of operations while increasing efficiency, scalability, consistency, and reliability.

Only a few years ago, RPA was a vision of the future. Now, 40% of shared services organizations have either already implemented or are in the process of implementing RPA. That means RPA is a necessity for staying competitive—if RPA is not on your horizon, you're falling behind.

Getting Started with RPA

ScottMadden's RPA Production-Ready Pilot will help you:

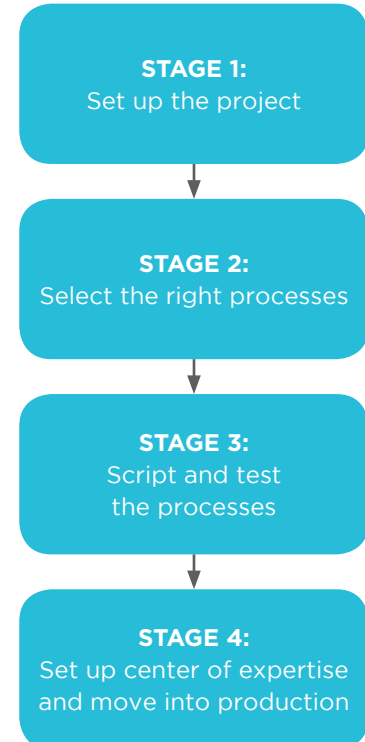

- Educate stakeholders on the value of RPA
- Select the right processes to pilot for optimal impact
- Design a sustainable operations and governance model to deliver real business value long term

Our experience designing shared services processes, coupled with our understanding of RPA-related processes, puts us in a position to help guide you through your initial RPA pilot, implementation, and on-going improvements.

A Strategic Partner for RPA Implementation

We have a deep understanding of processes that lend themselves to RPA and how shared services can generate the highest value for their organizations. This understanding, combined with our depth of expertise in large-scale implementations, helps us create the best possible result for you.

OUR PROCESS

ScottMadden can help you implement RPA the right way.

To get started with your RPA project, contact us at info@scottmadden.com.
